EXPLORE STORY

# What to Decide Before Building

Go through each item and note your changes

01

## Company Name

"SurfaceCraft" is a placeholder. Replace with your real business name everywhere — navbar, footer, contact page.

02

## Atmosphere Colour Tone

Current glows are warm stone (beige/warm gray). Want cooler marble tones (blue-gray) or warmer gold? Just tell the developer.

03

## Material Photography

The Products screen needs real close-up slab photos. Good photos = premium look. Try shooting slabs near a window with natural light.

04

## Hero Headline

"PREMIUM SURFACES REDEFINED" is a suggestion. Change to your own tagline or brand line if you have one.

05

## WhatsApp Number

Replace "+91 98xxx xxxxx" with your real WhatsApp Business number. This appears in the hero, contact, and footer.

06

## Real Stats/Numbers

Replace "500+ Projects" with your actual track record — years in business, cities served, materials available, etc.

07

## Animations on Website

The reel style uses WebGL animations. Your real website will have cursor-following glows, smooth parallax, and animated text — this PDF shows static layout only.

08

## Development Cost

This design level (dark immersive, minimal) costs Rs 15,000 – 35,000 with a good Bangalore freelancer. Basic: Rs 8,000 – 12,000.
